

LETTER OF INTENT (LOI)

MRI2GO x University Health Network (UHN)

Date: [Insert Date]

Prepared by: Adrian Drinkwalter & Rohan Dixon, Co-Founders, MRI2GO---

Subject: Strategic Partnership for Mobile MRI Service Expansion

This Letter of Intent ("LOI") outlines the proposed framework for a strategic partnership between MRI2GO and the University Health Network ("UHN") to enhance diagnostic imaging capacity across UHN facilities through the deployment of ten (10) fully operational mobile MRI units.

Scope of Partnership

MRI2GO will supply and operate ten Siemens MAGNETOM Viato. Mobile 1.5T MRI systems. These mobile units will be deployed across UHN's major hospitals and affiliated campuses to:

Increase overall MRI scanning capacity by 90,000 scans annually

Support 24/7 operations with MRI2GO-provided technologists and staff

Alleviate existing backlog and reduce patient wait times

Enhance access in underserved and high-volume patient areas

Key Terms (Subject to Final Agreement)

Deployment: MRI2GO will deliver and deploy all ten units within 7 months of contract signing, the standard delivery timeline for Siemens mobile systems.

Operation: MRI2GO will staff and operate each unit independently, with the option to collaborate with UHN techs or radiologists.

Integration: MRI2GO will integrate with UHN's PACS and EMR systems to ensure seamless clinical operations.

Billing Model: Billing will be structured on a per-scan, per-hour, or monthly lease basis as agreed upon in final contracts.

No Capital Investment Required: UHN will not be required to fund any equipment procurement, installation, or staffing.

Next Steps

Upon mutual execution of this LOI, MRI2GO and UHN agree to:

Initiate formal due diligence

Define technical integration parameters

Establish a detailed pilot plan (1–2 units)

Proceed toward a definitive service agreement

This LOI is non-binding and intended to establish a mutual framework and intent to proceed in good faith toward a formal agreement.

Signed:

Adrian Drinkwalter
